Dafina Petrova is a senior scientist at the Biomedical Research Institute ibs.GRANADA in Spain, jointly affiliated with the Andalusian School of Public Health and the University Hospital Virgen de las Nieves. She is also co-Principal Investigator of a research group at the CIBER of Epidemiology and Health (CIBERESP).

With a background in psychology and epidemiology, Dafina's research focuses on socio-economic inequalities and the social and behavioral aspects of cancer prevention and care. Her postdoctoral work has been supported by several competitive national fellowships, including Juan de la Cierva, Sara Borrell, and Miguel Servet for Clinical Research. Her research has been funded by the Health Institute Carlos III, the "la Caixa" Foundation, the Spanish Association Against Cancer, and the Spanish Foundation for Science and Technology. Her current projects examine the role of chronic stress in cancer incidence and aim to maximize the impact of cancer prevention recommendations across social groups.

Dafina participates in the European Prospective Investigation into Cancer and Nutrition (EPIC). She is also affiliated with the Cancer Registry of Granada, where she currently co-leads Work Package 4 on Sustainability in the Joint Action CancerWatch, funded by the European Commission. She was member of the Working Group on Communication and Health Literacy for the 5th edition of the European Code Against Cancer (IARC/WHO).

She has received several recognitions for her research, including the Professor Barea Prize for Healthcare Evaluation from Fundación Signo, the Best Epidemiology Article Award from the Spanish Society of Epidemiology, a Special Prize from the Elena Moroni Fund for Oncology, and the Scientific Career Award for Junior Researchers from the City of Granada, among others.
