Matteo Fassan, MD, PhD

WG member

Matteo Fassan is Professor of Pathology at the University of Padua and Director of the Pathology Unit of ULSS 2 Marca Trevigiana. He is involved in undergraduate and postgraduate medical education and contributes to several academic and professional activities in the field of pathology.

His clinical and research interests focus on anatomical pathology, molecular pathology, and gastrointestinal diseases, with particular attention to the molecular characterization of cancer, preneoplastic lesions and the identification of diagnostic and prognostic biomarkers.

His work combines routine diagnostic practice with translational research aimed at improving the understanding and management of neoplastic diseases.

Prof. Fassan has authored more than 700 scientific publications in international peer-reviewed journals and has participated in national and international research projects. He is also active in scientific societies and collaborative initiatives dedicated to the advancement of pathology and cancer research.

Through his academic, clinical, and research activities, he contributes to the development of pathology as a discipline and to the training of medical students, residents, and healthcare professionals.
